### Common Questions

#### Why should my business get certified as a Green Business?

- ◆ Saving energy, water and raw materials saves you money. Sending less trash to the landfill saves you money, too.
- ◆ Developing a positive, proactive relationship with local compliance inspectors can help you avoid liability, fines and other sanctions.
- ◆ The Program promotes Green Businesses to the public and other businesses (again, for free)!
- ◆ Your company's community image is enhanced through Green Business certification.
- ◆ Your employees will enjoy a safer workplace and will have one more reason to take pride in working for you.
- ◆ The Green Business Program offers you free, convenient, time-saving assistance.

#### Do I get credit for the good things I'm already doing?

Yes! In fact, your company may already qualify. These Standards are designed to fit most businesses, **but** if certain measures are not applicable or feasible for your facility and operations, you may request an exemption or demonstrate alternative measures.

#### Do I have to do everything on the checklist to become a Green Business?

No, there are many ways to qualify. You must meet the minimum standards in each category. Beyond that, you may use the checklist to identify "next steps" to becoming even greener.

#### What if I haven't had an energy, water or solid waste audit already?

The Green Business Program can arrange an audit for you as part of your certification.

#### How do I get started?

Read the checklist and check all boxes that apply. Call Steve Lederer, Green Business Coordinator, at 707/259-8228 with any questions.

#### Is there a fee to be certified as a Green Business?

No, Green Business certification is free!

#### **GREEN NOTE:**

**Going Green Counters Climate Change**  
*Climate Change results from increases in greenhouse gases, like carbon dioxide and methane, trapping heat that would otherwise escape the atmosphere. You can reduce this build-up (and your carbon footprint) by being green! Our checklist has many climate-friendly measures, such as:*

- ◆ **Conserve energy** with fluorescent lights and Energy Star equipment.
- ◆ **Reduce waste** at the landfill (and methane gas emissions)—recycle, compost and buy products with recycled content.
- ◆ **Conserve water** (and the energy to deliver it) with low-flow toilets and drought tolerant plants.
- ◆ **Invest in renewable energy** with renewable energy credits and solar panels.
- ◆ **Conserve fuel** by taking public transit, your bike or a high MPG vehicle.

# General Standards for All Businesses

## Certification

To be certified a Green Business you must:

1. Comply with all environmental regulations applicable to your business. Please ask staff about this.
2. Implement a variety of measures to save energy, water and other materials, and reduce waste. **This checklist walks you through this step!**
3. Allow site visits to verify that your business meets the above two steps.
4. Pledge to continue these terrific efforts to prevent pollution and conserve resources (including environmental compliance).

**Green Businesses** practicing resource efficiency are assuming stewardship for the Earth and its resources, with the goals of achieving a successful business operation, a healthy bottom line, and sustenance of the environment and its inhabitants. A Green Business not only conserves resources but educates employees and customers about resource conservation.

**Re-certification:** Certification as a Green Business is good for **three years**. We strongly encourage continuous improvement. When it's time to recertify, we will ask you to show us additional measure(s) you have implemented.

## Measures

The following general measures are required for all businesses:

- Track water and energy usage and solid and hazardous waste generation.
- Provide 3 on-going incentives or training opportunities to encourage management and employee participation in the Green Business Program. For example, incorporate Green Business into:
  - ◆ Performance appraisals, job descriptions, training programs, employee orientations
  - ◆ Staff meeting discussions
  - ◆ Your employee reference materials
  - ◆ Your company newsletter or bulletins
  - ◆ Your company suggestion and reward programs
- Inform your customers about your business' environmental efforts and what you are doing to meet the green business standards. For example:
  - Post the Green Business logo, certification and pledge in a visible location.
  - Post reminders listing steps you are taking to be a Green Business.
  - Offer tours that highlight your Green Business successes.
  - Offer customers "green" service or amenities options.
  - Highlight your Green Business efforts and/or certification on your website, and link it to the GBP home page.
  - Other: \_\_\_\_\_
- Assist at least one other business in learning about becoming a Green Business. Encourage them to enroll in the Green Business Program and provide their contact information to your GBP coordinator.

# Solid Waste Reduction & Recycling

## Measures

### 1. Look in your garbage dumpster annually to see if there are items that could instead be reused by someone else or recycled.

#### 2. REDUCE waste in 7 ways.

- Bottling operations have been evaluated for opportunities to reduce bottle waste.
- Maintain proper storage conditions (e.g. temperature, humidity, etc.) to reduce material degradation.
- Bilingual signs are posted near dumpsters on what materials can and cannot be disposed.
- Discourage the printing of emails.
- Set copier/printer defaults to double-sided.
- Practice efficient printing and copying by using the size reduction feature—print two pages of a document or book onto one page.
- Use computer fax modems that allow faxing directly from computers without printing.
- Eliminate fax cover sheets by using "sticky" fax directory notes.
- Eliminate unnecessary forms, redesign forms to use less paper, or switch to electronic forms.
- Use a bulletin board or routing lists for memos and journals to reduce printed copies.
- Reduce all unwanted mailings:
  - Eliminate duplicates by returning labels requesting all but one be removed.
  - Reduce junk mail. Guidance and a PDF kit are at <http://stopjunkmail.org> Reduce catalogs at [www.catalogchoice.org](http://www.catalogchoice.org)
  - Eliminate duplicates in your own mailing lists.
- For new software, order only the number of manuals needed. Do the same with phone books. Encourage employees to share.
- Subscribe to journals online rather than receiving hard copies.
- Design marketing materials that require no envelope – simply fold and mail.
- Buy products in returnable or reusable containers.
- Work with vendors to minimize packaging.
- Eliminate the use of non-recyclable packaging, such as Styrofoam.

- In the lunch/break room, replace disposables with permanent items (e.g., mugs, dishes, utensils, towels/rags, coffee filters, etc.) and use refillable containers for sugar, salt & pepper, etc. to avoid individual condiment packets.
- Serve dishes at office events in reusable serving dishes.
- Eliminate single-use plastic water bottles.
- Centralize purchasing to eliminate unnecessary purchases and ensure all waste reduction purchasing policies are followed.
- Use optical scanners, which give more details about inventory, for more precise ordering.
- Lease, rather than purchase, computers and printers.
- Leave mowed grass on lawn ("grasscycling").
- Other: \_\_\_\_\_

#### 3. REUSE materials in 3 ways.

- Print on previously printed paper, or designate a tray on printers as a "draft" tray.
- Reuse office paper as scratch paper.
- Reuse envelopes by covering old addresses and postage, and affixing new.
- Give or sell reusable cloth bags (this is required for stores over 10,000 sq.ft).
- Offer a small incentive to customers bringing their own shopping bags, coffee mugs, etc.
- Have your customers return packaging to you for reuse.
- Reuse paper or plastic packaging materials.
- Designate a reuse area for office supplies such as binders, folders and staplers.
- Reuse garbage bag liners.
- Have your toner cartridges refilled for use.
- Donate furniture, supplies, scrap materials, etc., or use a waste exchange program where another business can take your unwanted items ([www.ciwmb.ca.gov/CalMAX](http://www.ciwmb.ca.gov/CalMAX)).
- Other: \_\_\_\_\_

#### 4. RECYCLE all of the required materials and at least one additional material.

- REQUIRED:** Cardboard

- REQUIRED:** Newspapers, office/mixed paper, junk mail
- REQUIRED:** Glass bottles and jars
- REQUIRED:** Metal cans, containers, aluminum foil
- REQUIRED:** Plastic bottles and containers
- Incorporate pomace and lees into vineyard solids, use as compost or have a compost company pick up.
- Diatomaceous Earth
- Natural cork
- Fiber barrels
- Plastics
- Scrap metal
- Landscape trimmings (green waste)
- Food waste for composting
- Wood, including pallets
- Carpeting
- Other: \_\_\_\_\_

insulation, interior paneling, composite lumber/wood, roofing, concrete, etc.

- Sell products made with recycled content.
- Purchase or obtain previously used furniture, supplies or materials ([ciwmb.ca.gov/CalMAX](http://ciwmb.ca.gov/CalMAX), [freecycle.org](http://freecycle.org), Craig's List). List examples:

\_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

- Other: \_\_\_\_\_

**5. Buy the first required item and at least three more items with recycled content.**

Purchasing products made from recycled materials conserves resources and is essential to support the recycling market.

- REQUIRED:** Copier/printer paper with at least 30% post-consumer waste.
- Copier/printer paper with 100% post-consumer waste.
- Written policy guiding purchase that emphasizes buying recycled-content and low-toxicity products.
- Tasting Room – stock/sell products made with recycled content.
- Folders or other paper products.
- Envelops.
- Letterhead.
- Business cards.
- Paper towels.
- Tissues.
- Toilet paper.
- Toilet seat covers.
- Garbage bags.
- Boxes or bags for retail use or shipping.
- Recycled or remanufactured laser and copier toner cartridges.
- Carpet, carpet undercushion, or flooring.
- Remodeling/construction materials: cabinets, fixtures, ceramic and ceiling tiles, drywall,

# Energy Conservation

## Measures

### 1. Required: Complete regularly scheduled maintenance on your HVAC (heating, ventilation and air conditioning) and refrigeration systems at least twice a year.

- Clean permanent filters with mild detergents every two months (change replaceable filters every 2 months).
- Check entire system each year for coolant leaks, duct sealing, clogs, and obstructions of air intake and vents.
- Clean condenser coils of dust and lint.
- Clean evaporator coils of excessive frost.
- Inspect and repair economizers on AC systems.
- Assign a person to monitor each energy bill for sudden rises in energy use.

### 2. Save energy in 10 ways (including all required measures).

#### EQUIPMENT & FACILITY:

##### General

- Tanks have been equipped with reset controls.
- Insulations jackets are used on at least 50% of the tanks.
- Use office equipment with energy saving features (e.g. ENERGY STAR®) and ensure ENERGY STAR settings are enabled.
- Use power management software programs that save energy by automatically turning off idle monitors and printers (must be purchased separate from computer).
- Use sensors on cold vending machines and place machines in shaded areas.
- Use weather stripping (weatherizing and caulking) to seal air gaps around doors and windows.
- Insulate all hot water pipes.
- Use instantaneous hot water heaters at point of use.
- Use a solar water heater or preheater.

- Purchase ENERGY STAR® qualified refrigerators.
- When repainting building exterior and roof, choose light colors to reflect more sunlight.
- Other: \_\_\_\_\_

##### Lighting

- REQUIRED:** Replace all T-12 fluorescent lighting with energy-efficient T-8 or T-5 fixtures with electronic ballasts or other equivalent efficacy lighting.
- REQUIRED:** Replace any incandescent bulbs with efficient compact fluorescents or other high efficacy lamps (lumens/watt >50) where appropriate.
- REQUIRED:** Improve exit sign efficiency to less than 5 watts per sign by using LED, electroluminescent, photoluminescent or other applicable signs.
- Reduce number of fixtures or lamps per fixture where appropriate and increase lighting efficiency by installing optical reflectors and/or diffusers.
- Use lighting controls such as dual technology occupancy sensors, bypass/delay timers, photocells, or time clocks, especially in low occupancy areas such as closets and restrooms.
- Use dimmable ballasts and daylight controls such as astronomical clocks to dim lights to take advantage of daylight.
- Other: \_\_\_\_\_

#### **GREEN NOTE:**

*Outdoor lighting offers an excellent opportunity to conserve energy as it often remains on for long hours. Using efficient lights (e.g., compact fluorescents) and timer controls or photo sensors, can reduce wasted energy and your monthly bill. This measure alone may reduce energy use by 15%.*

*Energy Star®-compliant monitors have power management features and consume up to 90% less energy. Screen savers don't save energy!*

*Energy Star® copiers and fax machines can reduce their annual electricity costs by about 60% and 50% respectively.*

### Heating, Ventilation & Cooling

- The chiller model used has been evaluated and is the correct size for the load.
- The refrigerant appropriate for the process is being used.
- The evaporator and condenser have been evaluated and are the right size for the load.
- All glycol lines are insulated.
- Glycol lines have been evaluated and are the correct length and size.
- The glycol temperature setting is routinely checked manually and has automatic reset controls.
- Use a 365 day programmable thermostat to control heating and air conditioning.
- Use bypass timers and/or time clocks.
- Supplement A/C systems with evaporative coolers on condensers.
- Use economizers on A/C to increase air circulation.
- Replace single or package A/C unit with one that exceeds Title 24 building standards.
- Use CO<sub>2</sub> occupancy sensors to control air conditioning and heat.
- Provide shade for HVAC condenser, especially roof-top fixtures
- Shade sun-exposed windows and walls: use awnings, sunscreens, shade trees or shrubbery.
- Apply window film to reduce solar heat gain on clear, single-pane non-Northern facing windows. Refer to your energy provider for specifications and rebates.
- Use energy-efficient double paned windows on at least 90% of windows.
- Other: \_\_\_\_\_

### Motors & Pumps

- Use an outside air intake (cool air takes less energy to compress).
- Use engineered nozzles and fittings to reduce "waste" compressed air.
- Control compressor system to ensure operation only during working hours.

- Install Variable Frequency Drives on pumps or motors for air handlers, pools and chillers.
- Downsize oversized motors or replace a large motor with several small motors that can be run individually to meet smaller tasks (about 30% of motors operate at less than 50% of full load).
- Purchase a more efficient motor instead of rewinding an older one.
- Other: \_\_\_\_\_

### OPERATIONAL PRACTICES:

#### General

- Security guards are trained to turn off lights during their rounds.
- New equipment purchases are made for optimal performance and results by including adjustable speed drivers, multi-speed motors, and "right sized" pumps.
- Energy efficient technologies and designs are used throughout including sloping floors, stacking tanks, solar aerators, smaller diameter pipes, and software for monitoring equipment performance.
- Energy conservation and efficiency information is available in Spanish.
- Institute a written policy that all electronic devices and lighting be turned off when not in use and use light switch reminders to remind staff to turn off lights when not in use.
- Use the standby mode on equipment (e.g., energy saver buttons on copiers).
- Rearrange workspace to take advantage of areas with natural light and design for increased natural lighting when remodeling.
- Other: \_\_\_\_\_

#### Lighting

- Clean lighting fixtures, diffusers and lamps so they are lighting as effectively as possible (dirt can reduce lighting efficiency by up to 50%).
- Properly set and maintain lighting control devices (current time and on/off schedule) such as time clocks, photocells and sensors and adjust for season.
- Use task lighting instead of lighting the entire area.
- Other: \_\_\_\_\_

### Heating, Ventilation & Cooling

- Set thermostat to 78° F for cooling, 68° F for heating and use the thermostat's night setback.
- Seal off unused areas. Block and insulate unneeded windows and other openings.
- Use small fans OR space heater during off hours instead of conditioning entire office.
- Adjust controls for temperature, speed or other settings to reduce energy use.
- Other: \_\_\_\_\_

**GREEN NOTE:**

*A simple tune-up can increase the energy efficiency of your furnace by 5% and you can save up to 10% by insulating and tightening up ventilation ducts.*

*Ceiling fans use 98% less energy than central A/C units. And heating with natural gas instead of electricity can be 40-56% more efficient.*

# Water Conservation

## Measures

### 1. Save water in these REQUIRED ways.

- Assign a person to monitor each water bill for sudden rises in water use. Call your water company should this happen. You can also ask for ways to save water.
- Regularly check for and repair all leaks in your facility. Leaks in toilet tanks can be detected with leak detecting tablets, which may be available from your water company.
- Install low-flow aerators and showerheads (your water company may offer these for free):
  - As low as 0.5 gpm and no greater than 2.5 gpm for lavatory sinks
  - 2.0 gpm or less for kitchen sinks
  - 2.0 gpm or less for showerheads
- Use signs in restrooms to encourage water conservation and to report leaks.
- Use only dry methods to clean outdoor hard surfaces and post instructions for staff. Call your water company for any exceptions to this rule.
- If you have landscaping/irrigation:
  - Install matched precipitation rate sprinkler heads in turf areas.
  - Test irrigation sprinklers 4 times per year to ensure proper operation and coverage and repair all broken or defective sprinkler heads/nozzles, lines and valves.
  - Adjust sprinklers for proper coverage—optimize spacing, avoid runoff onto paved surfaces.
  - Water during early morning, pre-dawn hours to reduce water loss from evaporation.
  - Use repeat cycles when watering turf, planting strips or shrubs to encourage percolation and deep root growth.
  - Adjust the irrigation schedule monthly during irrigation season, or as needed.

### 2. Save water in four other ways, including the two required ways.

Consider areas of greatest water use (facility or landscaping) in choosing new measures. Be sure to ask your water company about rebates.

#### Facility:

- REQUIRED:** Install toilets using 1.6 gpf (gallon per flush) or less.
- REQUIRED:** Install water flow meters on all large irrigation systems.
- Go beyond the above 1.6 gpf toilets to 1.3 gpf HETs (High Efficiency Toilets)! Check both this measure *and* the above one. Ask your water district for rebates when replacing 3.5 gpf or higher toilets with the HETs.
- Provide additional urinals in men's restroom and reduce number of toilets (urinals use less water than toilets).
- Replace flush mechanism in urinals with ones that flush at 1.0 gallon or less (as low as 0.125 gpf) or install new waterless types.
- Install self-closing faucets (0.5 gpm and 0.25 gallon/cycle).
- Set up an annual program to educate staff about the benefits of efficient water use.
- Schedule your water company to make a presentation to staff to encourage water conservation at home. (Some water companies offer training and "take home" conservation kits.)
- Indoors, use dry floor cleaning methods, followed by damp mopping, rather than spraying or hosing with water.
- Change window cleaning schedule from "periodic" to "as required."
- Reduce water pressure to no higher than 50 psi by installing pressure reducing valves.
- Adjust boiler and cooling tower blowdown rate to maintain TDS (total dissolved solids) at levels recommended by manufactures' specifications.
- Replace water-cooled equipment, such as air conditioning units, with air-cooled.
- Other: \_\_\_\_\_

Industrial Uses:

- Sumps, interceptors, or traps are inspected quarterly and cleaned annually.
- Pre-cleaning of equipment surfaces is done with appropriate tools (e.g., a stiff brush) to loosen and remove large material before wash-down.
- Lab sinks and rinse tanks are fitted with water-saving devices (such as flow restrictors).
- Final rinse of tanks is saved for reuse and recycling; and recycled water is used for first rinse of tank.
- When cleaning floors with water (check all that apply):
  - High-pressure, low volume cleaning equipment with shut off nozzles is used;
  - Mop and buckets are used instead of hosing;
  - Ozone cleaning equipment is used.
  - Document clean-up policies; include water saving plans.
- Developed and implemented a comprehensive water conservation program.
- Organized and implemented a water team.
- Provide water conservation information in English and Spanish.

- Reduce irrigation system water pressure to no higher than 50 psi (pressure-reducing valves must be installed to do this).
- Use reclaimed water for irrigation and other approved uses.
- Install a self-adjusting weather-based irrigation controller that automatically tailors watering schedules to match local weather, plant types, and other site-specific conditions. Controller must be certified under the Irrigation Association's SWAT protocol.
- Work with your water company to develop a site-specific "water budget". Track your water use to ensure efficient watering.
- Other: \_\_\_\_\_

**GREEN NOTE:**

*A faucet with a slow leak can waste 10 gallons of water a day, or more!*

*A single leaky toilet can waste as much as 1000 gallons of water per day.*

Landscaping:

- Turf is aerated and dethatched annually.
- Mulch all non-turf areas.
- Plant drought tolerant plants (assistance is available from your water company).
- Hydrozone: Group plants with similar water requirements together on the same irrigation line, separating plants with different water requirements on separate irrigation lines.
- Reduce area of turf.
- If installing new turf, limit area and use drought tolerant species, space sprinkler heads such that the water from one sprinkler head reaches the adjacent sprinkler heads.
- Modify your existing irrigation system to include drip irrigation.
- Install rain shut-off devices that turn off the irrigation system during rain.
- Install irrigation controllers that have at a minimum the following features: precise 1-minute runtime capability; a minimum of 3 separate programs; and 3 cycle start time features.

# Pollution Prevention

## Measures

### 1. Assess your office annually to identify ways to prevent pollution.

- ◆ Check Material Safety Data Sheets (MSDS) and labels for all chemicals, cleaning products, building maintenance materials, pesticides, and fertilizers you use. Identify safer alternatives. Avoid products with labels containing Prop. 65 warnings.
- ◆ Dispose of any hazardous waste at your local Household Hazardous Waste Program.

### 2. Prevent pollution in 10 ways, including the required measures.

#### Storage, cleaning closets and cellar areas:

- Seal cellar floor with an impermeable coating such as epoxy.
- Design berms, secondary containment or grading to prevent run-off or rain water from flowing across industrial and hazardous liquid storage areas where it could be contaminated
- Have no open floor drains in the process area.
- Store any potentially hazardous materials securely, control access and rotate stock to use oldest material first.
- Store deliveries and supplies under a roof.
- Locate all potential pollutants away from food storage areas as well as sewer and storm drains.
- Provide containment for large amounts of liquid supplies such as cleaners and paints.
- Routinely check for and address leaks, spills and emissions of chemicals, paints, and cleaners.
- Use an enclosed delivery system, such as pipes or hoses, for transferring cleaners or other chemicals to prevent spills and splashes.

#### Outdoor walkways, parking, and driveways:

- REQUIRED:** Ensure that nothing other than rain enters a storm drain.
- REQUIRED:** Keep dumpsters covered, not overflowing and impermeable to rainwater. Keep dumpster and parking areas clean.
- REQUIRED:** If using water to clean parking or other outdoor areas, hire a BASMAA-certified mobile cleaner ([www.basmaa.org](http://www.basmaa.org)).

Contractor must use equipment that collects wash water and disposes to sanitary sewer.

- REQUIRED:** Do not wash cars, equipment, floor mats or other items outside where run-off water flows straight to the storm drain; this wash water should be directed to a sewer drain.
- REQUIRED:** Clean private catch basins annually, before the first rain and as needed thereafter.
- Use shut-off valves at storm drains on property or keep temporary storm drain plugs available at loading docks or outdoor process areas for quick spill response.
- Keep a spill kit handy to catch/collect spills from leaking company or employee vehicles. Make sure there is adequate absorbent material to contain the largest possible spill.

#### ***Only Rain Down The Drain!***

*The storm drain system is separate from the sanitary sewer system, and pollutants that enter these drains flow directly into creeks and the bay without treatment. Educate personnel about this difference and the importance of not letting contaminants enter storm drains.*

**All businesses are required to prevent anything except rainwater from entering storm drains from any of the following activities or sources:**

- ◆ Loading docks
- ◆ Dumpster areas
- ◆ Outdoor working areas
- ◆ Storage areas
- ◆ Landscaping
- ◆ Construction
- ◆ Cleaning equipment/tools
- ◆ Pre-painting
- ◆ Power-wash water
- ◆ Washing vehicles
- ◆ Cleaning parking lots

- Post signs at targeted trouble spots to explain proper practices to prevent pollutants from reaching storm drains.
- Clean outdoor surfaces by dry sweeping.

- Mulch, use ground cover, or use a barrier to prevent exposed soil from washing landscaped areas into storm drain.
- Regularly check and maintain storm drain openings and basins. Keep litter, debris and soil away from storm drains.
- Label all storm drains with "No dumping, Drains to Bay" message.
- Other: \_\_\_\_\_

**3. Reduce chemicals used in eight ways, including the required measures.**

- REQUIRED:** Reduce chemicals (process chemicals, cleaners, pesticides, paints, etc.) used and stored, disposing of any unneeded products at the local Household Hazardous Waste Program.
- REQUIRED:** Work with your janitorial or building maintenance staff to use safer alternatives to potentially harmful products. Require the use of low toxic cleaning products such as those that meet Green Seal certification standards ([www.greenseal.org](http://www.greenseal.org)). List products used: \_\_\_\_\_
- REQUIRED:** Replace all aerosols with pump dispensers, if available.
- REQUIRED:** Use no products with added antibacterial agents, such as triclosan. This includes products used for hand washing, dishwashing and cleaning.
- Reduce use or replace disinfectants used in industrial processes with environmentally preferable products. List \_\_\_\_\_.
- Eliminate the *routine* use of all disinfectants and sanitizers, unless needed to comply with Environmental Health.
- Use one or a few low-toxicity multipurpose cleaners, rather than many special-purpose cleaners.
- Require your janitorial staff to use micro-fiber dusters, towels and mops to trap dust particles.
- REQUIRED: Eliminate or reduce pesticides by using Integrated Pest Management (IPM), which includes good housekeeping, acting only when needed, making physical changes to keep pests out, and, lastly, using less or non-toxic pesticides. Implement all applicable measures:**
  - Keep kitchen, waste storage and other areas clean to prevent pest problems.

- When pest control is necessary, use barriers (such as caulking/sealing holes), traps and lastly, less toxic pesticides (such as soaps, oils, microbials and baits). Apply only as needed (rather than on a routine schedule).
- If you contract with a pest control operator, choose one that is EcoWise Certified ([www.ecowisecertified.com](http://www.ecowisecertified.com)), or specify in the contract that IPM and methods using non-chemical pest prevention and pest exclusion be used. Do not allow *any* outdoor perimeter spraying.

- Design and manufacture products free of carcinogenic, toxic, or hazardous materials.
- Do business with other "green" vendors or services, such as certified Bay Area Green Businesses (listings at [www.greenbiz.ca.gov](http://www.greenbiz.ca.gov)). List examples: \_\_\_\_\_
- Purchase organically or locally grown foods and beverages for the office kitchen. List examples: \_\_\_\_\_
- Use low- or no-VOC paint products.
- Use high-efficiency paint spray equipment with high solids paint.
- Use natural or low emissions building materials, carpets or furniture.
- Replace standard fluorescent lights with low or no mercury fluorescent lights. Approved models are Phillips F17T8/AD850/Altoll and Sylvania Fo17/850/xp/Eco.
- Obtain a battery recharger for the office. Use rechargeable (instead of disposable) batteries for flashlights, radios, remote controls and other devices that use standard batteries.
- Use recycled oil for vehicles/equipment.
- Use unbleached and/or chlorine-free paper products (copy paper, paper towels, napkins, coffee filters, etc.).
- Print promotional materials with vegetable or other low-VOC inks.
- Other: \_\_\_\_\_

**4. Recycle/reuse 4 of the following potential pollutants.**

- REQUIRED:** Properly store and recycle Universal Wastes as required by law. Designate a storage area for spent Universal Wastes, posting a sign and notifying employees of this

area. Ensure that these are recycled (and not put into the garbage). Universal Wastes are:

- Spent fluorescent light tubes & bulbs
  - Electronic equipment (computers, cell phones, pagers, etc.)
  - Batteries (RBRC recycles these for free! [www.rbrc.org](http://www.rbrc.org))
- Excess paint/solvents (keep only what is needed for touch-ups, then take remainder to hazardous waste collection program, donate to anti-graffiti program, or return to contractor or manufacturer).
- Distill or regenerate spent cleaning solutions on-site.
- If hazardous materials are essential to the product and cannot be eliminated, design the products such that these materials can be extracted and recycled into new products. Develop a consumer take-back system to recover these spent products.
- Recover spilled fluids for reuse or recycling (wring from mop, rags or pads/mats, or discharge from vacuum). Place into appropriate waste containers.
- Used copier toner and ink jet cartridges.
- Car fluids from company vehicles.
- Donate for reuse (not just recycle) electronic equipment. If they cannot be reused, take them to an "e-steward" for responsible recycling ([www.ban.org/#ThePledge](http://www.ban.org/#ThePledge)).
- Other: \_\_\_\_\_

**5. Reduce vehicle emissions in 3 ways:**

- REQUIRED:** Join the Air District's "Spare the Air" program ([www.sparetheair.org](http://www.sparetheair.org)) and notify staff of "Spare the Air" days.
- REQUIRED:** Contact 511 Contra Costa to have staff assess commute alternatives for employees. Either register (in 30 seconds!) at [www.511contracosta.org/employer-services](http://www.511contracosta.org/employer-services), or call (925) 969-1193 to speak with someone directly about options.
- When possible, arrange for a single vendor who makes deliveries for several items.
- Patronize services close to your business (e.g., food/catering, copy center, etc.) and encourage employees to do the same.
- Use route optimization software or have documented delivery plans.
- Other: \_\_\_\_\_

**SPARE THE AIR PROGRAM**

*Spare the Air Days are called when air quality is expected to be unhealthy. Participating businesses receive Spare the Air Day email alerts and free information on ways to improve air quality. Join by visiting the Bay Area Air Quality Mgmt. District's website at [www.SparetheAir.org](http://www.SparetheAir.org). Click "subscribe to AirAlert email notices" on the right pane.*

Commute Alternatives

- Hire locally.
- Offer telecommuting opportunities and/or flexible schedules.
- Offer employees pre-tax commuter benefits for transit, vanpool or biking costs. See [www.rideshare.511.org/rideshare\\_rewards/](http://www.rideshare.511.org/rideshare_rewards/).
- Encourage employees to rideshare by posting commuter ride sign-up sheets and providing other commuter incentive programs (e.g., rideshare incentive programs, or a guaranteed ride home in emergency situations; see [www.rideshare.511.com](http://www.rideshare.511.com)).
- Encourage employees and customers to bike and use public transit by posting bicycle ride maps and transit schedules/maps (see [www.511.org](http://www.511.org)).
- Offer lockers and showers for staff who walk, jog or bicycled to work.
- Offer secure bicycle storage for staff and customers.

Other Greenhouse Gas Emissions

- Complete a CO2 or eco-footprint calculator to determine your own greenhouse gas emissions.
- Convert company vehicles to low emission vehicles.
- Offer electric vehicle recharge ports for visitors and staff using electric vehicles.
- Use biodiesel (100% or blends) or vegetable diesel in place of petrodiesel in vehicles.
- Install renewable energy sources, such as solar panels or wind generators.
- Buy renewable energy credits or green tags to offset the GHG emissions from your business's travel and use of energy (see [www.green-e.org](http://www.green-e.org), [livenutral.org](http://livenutral.org) and [terrapass.org](http://terrapass.org)).
- Participate in PG&E's Climate Smart Program.
